**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-19 and 21 are allowed, and renumbered 1-20.

2. The following is an examiner's statement of reasons for allowance:

Consider claim 1, the best prior arts found during the examination of the present application, the combination of Boltz (US Patent No. 6, 311,055 B1), Kirbas et al. (U S. Publication No. 2002/0165012 A1), and Leung et al. (US Pat. 7,036,143 B1) discloses a wireless communication device for use by an individual of an enterprise, a method for use in providing restrictions on long distance calls attempted from the wireless communication device through a wireless communication network with use of a host enterprise server, the method comprising the acts of: regularly performing data synchronization, over a wireless link of the wireless communication network, for user data items of a personal information manager application of the wireless device and corresponding user data items stored in association with the host enterprise server, the host enterprise server being connected in a private communication network of the enterprise which is not part of any wireless network within which the wireless device is adapted to operate; determining, at the wireless device of the individual, whether a call attempt from the wireless device is restricted by comparing a country code or area code of a telephone number of the call attempt with the one or more country codes or area codes of the long distance call restriction information; if the wireless device determines that the call attempt is restricted by the long distance call restriction information,

inhibiting the call attempt from the wireless device over the wireless network; and if the wireless device determines that the call attempt is not restricted by the long distance call restriction information, allowing the call attempt from the wireless device for establishing a call over the wireless network.

However, the combination fails to disclose receiving, over a wireless link of the wireless network, long distance call restriction information from the host enterprise server in the private network, the host enterprise server having the long distance call restriction information stored in a user profile which is unique to the individual and being one of a plurality of user profiles for individuals of the enterprise, the long distance call restriction information being indicative of one or more country codes or area codes; storing the long distance call restriction information received from the host enterprise server.

Therefore, this limitation, in conjunction with the other limitations recited in the claims are novel and unobvious in view of Boltz, and further in view of Kirbas et al., and further in view of Leung et al., and all the prior art of record.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
